

Microsoft Agent 365 Inbound Integration with Tavro

1. Objective

The objective of this integration is to connect **Microsoft Agent 365** with Tavro so that AI agents available in the Microsoft 365 Admin Center are automatically imported into the Tavro Agent Bizops. When the connector is executed from the Tavro Admin Portal, it authenticates with Microsoft using Device Code Flow, retrieves agent metadata from the Microsoft Graph Package Management API, enriches each agent with detailed package information, and upserts the agents into Tavro. The integration imports agent metadata such as the agent name, description, instructions while also updating existing agents and deactivating agents that are no longer available in Microsoft 365.

2. Prerequisites

2.1 Microsoft 365 Tenant

- A Microsoft 365 tenant with Microsoft Agent 365 enabled and licensed.
- At least one AI agent created using Microsoft Copilot Studio, Azure AI Foundry, or published to the Microsoft 365 Admin Center.
- The Microsoft Graph Package Management API must be available for the tenant.

2.2 Microsoft Entra ID (Azure AD) Credentials

- A Microsoft Entra ID (Azure AD) application registration.
- The application must have the CopilotPackages.Read.All delegated Microsoft Graph permission (or CopilotPackages.ReadWrite.All if package management operations are required).
- Admin consent must be granted for the required delegated permissions.
- Allow public client flows must be enabled in the app registration to support Device Code Flow authentication.
- A Microsoft 365 Global Administrator (or equivalent administrator with the required permissions) must complete the one-time Device Code authentication.

2.3 Tavro Application

- Tavro source code cloned from the open-source repository
- Docker and Docker Compose installed
- Tavro Admin Portal accessible in a browser

3. Integration Approach

The integration uses Tavro's built-in connector framework together with the Microsoft Graph Package Management API. Authentication is performed using Microsoft Device Code Flow, where a Microsoft 365 administrator completes a one-time sign-in to authorize the connector. The resulting refresh token is securely stored and used for subsequent synchronization runs.

When **Run Connector** is clicked in the Tavro Admin Portal, the connector queries the Microsoft Graph Package Management API to retrieve all Microsoft 365 Copilot packages available in the tenant. It filters the packages to identify AI agents, enriches each agent by retrieving detailed package metadata, and imports the agents into the Tavro Agent Bizops.

Each Microsoft 365 agent is imported with its available metadata, including:

- Agent ID
- Agent name
- Description
- Instructions

During each synchronization, Tavro performs an upsert operation based on the Microsoft 365 agent identifier. Existing agents are updated with the latest metadata, new agents are created automatically.

4. Integration Steps

4.1 Clone the Tavro Repository

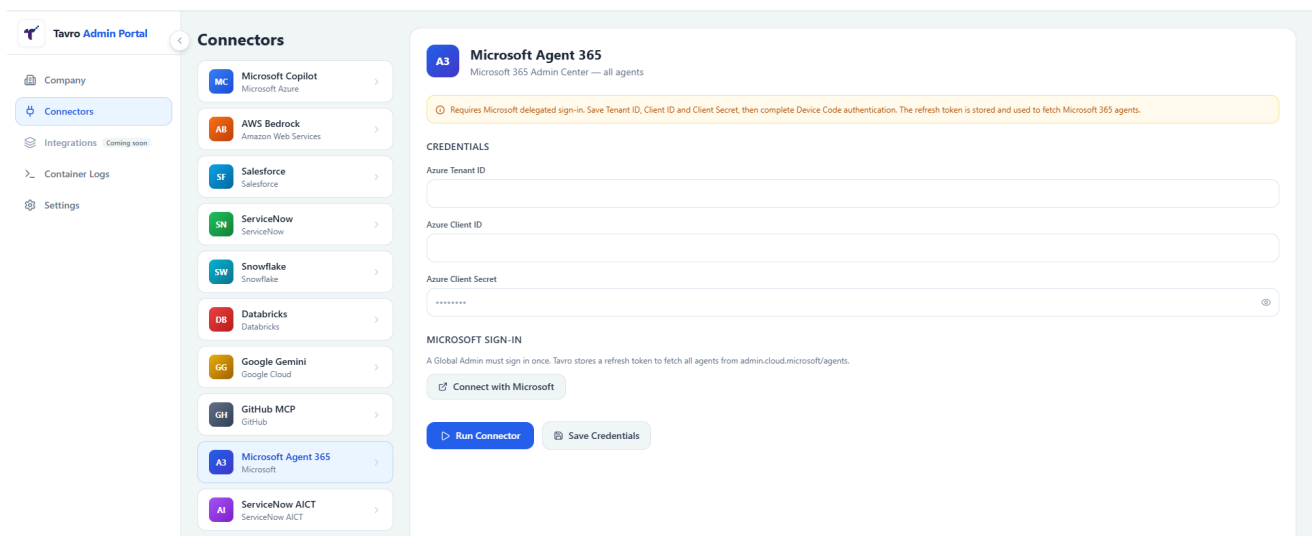

- Clone the Tavro source code from:
- git clone <https://github.com/TavroOrg/tavro.git>
- cd tavro

4.2 Start the Tavro Application

- docker compose up -d --build

4.3 Configure the Connector in the Admin Portal

- Open the Tavro Admin Portal and navigate to **Admin** → **Connectors**.
- Find the Microsoft Agent 365 connector and click **Configure**.
- Enter the following connection details:
- **Azure Tenant ID:** <your-azure-tenant-id>
- **Azure Client ID:** <your-azure-client-id>
- **Azure Client Secret:** <your-azure-client-secret>
- Click **Save**.
- Click **Connect with Microsoft**.
- Complete the Microsoft Device Code authentication by signing in with a Microsoft 365 Global Administrator account.
- Once the authentication is successful, the connector stores the refresh token and is ready to synchronize Microsoft 365 agents.

4.4 Run the Connector

- Click **Run Connector** on the Microsoft Agent 365 connector.
- The connector authenticates using the stored refresh token and retrieves Microsoft 365 Copilot agents from the Microsoft Graph Package Management API.
- During synchronization, Tavro imports new agents, updates existing agents with the latest metadata, and marks agents that are no longer present in Microsoft 365 as inactive.
- Once the synchronization is complete, navigate to the Agent Bizops to view the imported Microsoft 365 agents along with their metadata, including agent id, agent name, description, instructions exposed by the Microsoft Graph Package Management API.

4.6 Verify in the Agent Bizops

- Navigate to Agent Bizops in Tavro. The imported agents should appear with: • ID, Name, description, instruction from Microsoft Agent 365

Imported Agents in the Tavro Agent Bizops showing Agent Metadata (Agent ID, Name, Description, Instruction)

Identification & Role

Workway is your ultimate personal and professional transformation tool within Microsoft Teams, now enhanced with Microsoft 365 Copilot. Access a rich library of expert-led programs and meditations designed to unlock your potential and drive professional impact. Workway empowers you with: • Quests: Engage in daily, bite-sized lessons for continuous learning and growth in curated categories related to career, health, mindset, collaboration, intrapreneurship, and soul. • Meditations: Access a diverse range of guided meditations focusing on stress relief, confidence, energy, and more, enhancing both personal well-being and professional performance. • Soundscapes: Enjoy hundreds of soundscapes that can be played in the background while you work, creating a serene and productive environment. • Copilot Agent: Discover content effortlessly through our Copilot Agent, leveraging the power of natural language to find the right resources for your needs. • Sharing: Effortlessly create impactful team experiences with your favorite content. Unlock your potential with Workway and redefine the way personal growth fuels professional success. With over 100 programs, a library of 1,000+ meditations, and hundreds of soundscapes, Workway provides a comprehensive suite of tools to support your growth journey. For further inquiries or assistance, please contact our support team [here](https://support.getworkway.com/).
